# Wind Power

Wind is air on the move.  
See what wind can do.

Wind can whip up  
some fun!

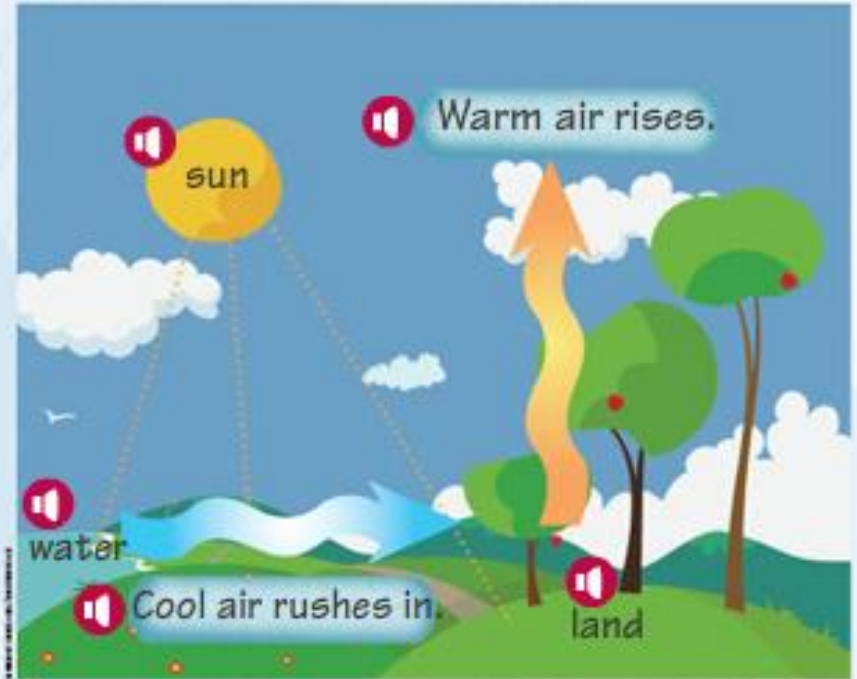

Wind starts with the **sun**.  
The sun warms land and water.  
The air above warms up, too.

Warm air rises.  
Cooler air rushes in.  
That moving air is wind.

What Is Wind?

 Wind is **energy**. It can push a sailboat.

 Look at the windmills spin!  
They turn wind energy into electricity.

What else can wind do?
