

# Weather Forecast

Weather forecasters (also known as meteorologists) collect & analyze weather data in order to predict the weather in a specific region. They gather information in order to keep their audience informed. Their job is especially important during extreme weather phenomenon.

Research a specific weather phenomenon that affects our country. Create a television weather forecast for a specific region, warning viewers of the impending danger. While the forecast is fictional, the weather phenomenon is real; please include as many details as possible.

It may be helpful to watch and/or listen to local meteorologists as you prepare your forecast; as you will be presenting your forecast to classmates.
